

Green School Program

Green school project, is a project that involves both primary and secondary schools in Tanga City City Council. The project aims at building capacity and empowering youth physically and mentally on environmental conservation and tree planting practices. Empowering youth in primary and secondary schools will result in environmentally sound community that can stand firmly towards environmental conservation practices.

We practically teach students on how to prepare tree nurseries from choosing good soil, cutting propagation bags and filling them with mixed soil, soil:manure:sand ratios, planting seeds to the propagation bags, covering and watering process.
